

CIRCULAR SAWS

- Only persons trained in the safe operation of circular saws shall be allowed to operate them.
- **WARNING: Do not operate your saw until it is completely assembled and installed according to the instructions.**
- If you are not thoroughly familiar with the operation of circular saws, seek advice from your supervisor, knowledgeable employee, or other qualified person.
- AVOID awkward operations and hand positions where a sudden slip could cause your hand to move into the cutting tool. Find another way.
- **ALWAYS KEEP HANDS AND FINGERS AWAY FROM THE BLADE.**
- **NEVER** stand or have any part of your body in line with the path of the saw blade,
- **NEVER** reach behind or over the cutting tool with either hand for any reason.
- **NEVER** attempt to free a stalled saw blade without first turning the saw "OFF."
- **NEVER** start the saw with the workpiece pressed against the blade.
- **NEVER** use solvents to clean plastic parts. Solvents could possibly dissolve or otherwise damage the material. Only a soft damp cloth should be used to clean plastic parts.
- Should any part of your circular saw be missing, damaged, or fail in any way, or any electrical components fail to perform properly, shut off the switch and remove the plug from the power supply outlet. Tag and report the machine to your supervisor. Ensure that missing, damaged or failed parts are present and in good working order before resuming operation.

Additional information regarding the safe and proper operation of this product is available from the Safety Pass Center; the Production Safety Representative; the National Safety Council, the manufacturer, and your supervisor.
