GOLF CARTS

1. All golf carts must be inspected before each use and maintained according to the manufacturer's recommendations. Defective carts must be tagged and removed from service.

2. Golf carts are not to be modified in a way that will affect capacity and safe operation of the vehicle, including by adding trailer hitches.

3. Drivers of golf carts must obey all DMV vehicular traffic signs and regulations:
    - stop at posted intersections and blind corners
    - obey the speed limit and not pass moving vehicles
    - avoid quick or jerky stops or turns at fast speeds

4. Use extreme caution when driving up or down grades, turns, ramps or inclines.

5. Feet, legs, arms and hands are to be kept inside the vehicle at all times.

6. Golf carts may be left unattended only after being placed in park or neutral with the brake on, and the power off.

7. If the cart is parked on an incline, the wheels should be blocked to prevent rolling, or turned toward the curb when facing downhill, or turned away from the curb when facing uphill.

8. Never park the golf cart in a fire lane, an aisle or doorway, or block material or equipment to which someone else may need access.

9. Always proceed with caution around pedestrians, passing only when they are aware of your presence.

10. The number of passengers may not exceed the number of seats or the manufacturers recommended seating/weight capacity.

11. When carrying a load, it is the drivers responsibility to be sure the load is stable and will not fall off the vehicle while the vehicle is moving.

12. Only trained and authorized employees may operate golf carts. Seat belts or restraints, if provided, must be used.

13. Battery charging must be done only in designated, ventilated areas following the manufacturer's instructions. Unattended charging of lithium-ion batteries is prohibited.
